

Carriage Rollers

Carriage Rollers - Carriage rollers are specifically designed bearings which are used on lift masts in order to help them operate within tough environmental conditions. Lift masts are frequently subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is often exposed to environmental influences such as heat, dust, cold, moisture, contamination and aggressive ambient air. Therefore, the lift masts' guidance arrangements should be specifically robust and have a specific high load carrying capability.

Carriage rollers have been developed as the answer for functioning in different environmental conditions. These bearings are the answer where the guidance arrangements of the lift masts must be economical and maintain operational security while having the ability to deal with a particularly high load carrying capacity.
